September 17,2021

To our valued customers and employees,

In 2019 we embarked upon a journey that would fundamentally change how M & L Worldwide Logistics would interface with our client base. Through some unforeseen delays we have emerged on the other side of this with a renewed sense of accomplishment, and gratitude for the efforts made by everyone that has brought us to this point.

M & L has engaged with McLeod Software as a technology partner for our transportation management system. This system will bring our domestic truckload, LTL (less than truckload) and transport divisions to one platform. As well, our clients will have tracking visibility for their shipments via a web portal access login. Also, established customers will have the ability to quote and arrange LTL shipments through the portal. For accounting or management users, the ability to view aged receivables is also available.

We thank you for being a valued partner and appreciate your continued support. If you are interested in viewing the capabilities of the software click on the logo below.

Sincerely,

Debra Cunningham
